

## Table Edge Profile

We offer 12 standard edge profiles.

- T1 Square
- T2 Bullnose
- T3 Thumbmould
- T5 Radius to underside, 10mm
- T6 Radius to underside, 30mm
- T7 Reverse Chamfer with 10mm radius
- T8 Reverse Chamfer with 5mm radius
- T9 Reverse Chamfer
- T18 Deep Reverse Chamfer with 5mm radius
- T19 Deep Chamfer
- T10 Deep Square Edge - costed on request
- T11 Storm Edge

## Table Tops - Bespoke

Non-standard tops and edge specifications are available upon request. Please ask our Sales Office for details.

## Table Tops As Standard

Our table tops are constructed with a 25mm core. We provide three table top finishes as standard.

## Veneered MDF

A timber veneer over high density MDF with an exposed MDF edge, which is stained to your polish colour specification and then finished with a clear severe rated lacquer.

This is suitable for bar, lounge and reception areas or where occasional use occurs. We would not recommend this finish is specified in areas of heavy contract use where the table could be subject to mishandling, cigarette burns and marking.

Where lighter timber polish colours of P30 Natural Beech or P54 Light Oak are specified, we recommend that solidwood lipping is also selected.

## Realwood Laminate

A natural timber laminate over high density MDF with an exposed MDF edge, stained to a selection of standard colours. Trade names include Woodlam, Oberflex, Egger, Formica & Polyrey.

This specification will provide the highest level of heat resistance, including cigarette burns and impact damage and is therefore ideal for heavy contract use, more formal dining and conference or function areas.

As standard we provide this with a polished MDF edge profiled to your selected edge detail. If lighter timber polish colours of P30 Natural Beech or P54 Light Oak are specified we recommend that the solidwood lipping is also selected.

## Wood Effect Laminate

If realwood laminate is not required for your specification, we are able to offer a wide range of wood effect laminates, please contact our Sales Office.

## Solidwood Lipping

A timber veneer or a realwood laminate, over high density MDF with a solid timber edge which is either stained to your polish colour specification, or manufactured with an alternative timber species edge, and then finished with a clear severe rated lacquer.

The solid timber edge provides a more robust protection against knocks and impact damage as well as giving the appearance of a solid timber top.

Please refer to details on 'Veneered MDF' and Realwood Laminate above for areas of use.
